

# CAPITAL CONSTRUCTION

Hello all,

Well the summer is fast approaching and soon it will be POWWOW time in Pabineau. As well the salmon enhancement project should be beginning again soon. On the Capital construction side things will soon be advancing again with the water project in Pabineau and by now I am sure that everyone has had the chance to see the water tower. We all know that as a community it is important that we advance on the infrastructure side and the water tower is but one step in that direction.

Now that the water tower is in the next step in the project will soon be the installation of the raw water line. This project is a multiple year project with the last phase of the project being something that we all in Pabineau have been waiting with great anticipation for the paving of our roads.

Another step in the water project that will be soon coming up is the building of the water treatment facility. One that Stephen Randy Peter-Paul is anxious to see come to be.

As well by now everyone I am sure has seen the completed Health center another important step in our infrastructure development that chief and council have brought to the community. We are looking at a grand opening sometime in August for this building so stay tuned for a date that this will happen on.

On the job side of things....Trevali mining will soon be taking candidates for the upcoming mining course that will be happening this fall, the plan is to get two community members from ever community . At present we are taking resumes and if you know someone from the community that is interested in 20 years of employment and a very good salary tell them to contact myself at the band hall.

Till next time.....
